

**NodeJS / Basic Express App – Exercise 3**

Create a basic Express app that handles resource data.

- Choose any resource (books, users, products etc.), create a model type for this resource.
- Create a RESTful Api to handle the resource data.
- Use an array as a database.

**Notes:**

- Run the app, test all routes from Postman, and submit the Postman collection file with the project.
- Make sure to write clean code that follows all conventions – don't write functions, only classes and methods inside.
